

→ Standard Error: $S_{yx} = \sqrt{\frac{SSE}{n-2}}$

$H_0: b = 0$ against $H_1: b \neq 0$

$$T_c = \frac{\hat{b}}{\sqrt{\frac{SSE}{(n-2) \cdot S_{xx}}}}$$

→ Rejecting the Null Hypothesis means there is an evidence of linear relation.

Eg: $T_c = \frac{\hat{b}}{\sqrt{\frac{SSE}{(n-2) \cdot S_{xx}}}} = \frac{0.9674}{\sqrt{\frac{190.2216}{(15-2) \times 671.773}}} = \underline{\underline{6.50}}$
